

Git Commands

1. git init : Makes a normal folder into a Git project so Git can save and track your code changes.

```
PS C:\Users\Hp\OneDrive\Desktop\vsec> git init
Reinitialized existing Git repository in C:/Users/Hp/OneDrive/Desktop/vsec/.git/
```

2. git status: Shows the current status of your Git repository, such as which files are new, modified, deleted, or ready to be committed.

```
PS C:\Users\Hp\Downloads\vsec practical> git status
On branch main

No commits yet

Changes to be committed:
  (use "git rm --cached <file>..." to unstage)
    new file:   abc.html
```

```
PS C:\Users\Hp\Downloads\vsec practical>
```

Ln 1, Col 1 (43 selected) Spaces: 4 U

3. git add . : Adds all new and changed files to Git, making them ready to be saved in the next commit.

```
PS C:\Users\Hp\OneDrive\Desktop\vsec> git add .
PS C:\Users\Hp\OneDrive\Desktop\vsec> git status
On branch main
Your branch is up to date with 'origin/main'.

Changes to be committed:
  (use "git restore --staged <file>..." to unstage)
    new file:   Vsec.html/Password1.html
```

4. git config --list : Displays your Git configuration settings, such as your username, email, default editor, and other Git settings.

```
PS C:\Users\Hp\OneDrive\Desktop\vsec> git config --list
diff.astextplain.textconv=astextplain
filter.lfs.clean=git-lfs clean -- %f
filter.lfs.smudge=git-lfs smudge -- %f
filter.lfs.process=git-lfs filter-process
filter.lfs.required=true

remote.origin.fetch=+refs/heads/*:refs/remotes/origin/*
branch.main.vscode-merge-base=origin/main
branch.main.remote=origin
branch.main.merge=refs/heads/main
```

5. git config user.email "your_email" : Sets the email address that Git will use to identify you in your commits.

```
PS C:\Users\Hp\OneDrive\Desktop\vsec> git config user.email "kartikisjadhav06@gmail.com"
PS C:\Users\Hp\OneDrive\Desktop\vsec> git add .
PS C:\Users\Hp\OneDrive\Desktop\vsec> git status
On branch main
Your branch is ahead of 'origin/main' by 1 commit.
  (use "git push" to publish your local commits)

nothing to commit, working tree clean
PS C:\Users\Hp\OneDrive\Desktop\vsec>
```

6. **git remote add origin https://github.com/USERNAME/VSEC_ASS.git :**

Connects your local Git project to a GitHub repository so you can push and pull code.

```
PS C:\Users\Hp\OneDrive\Desktop\vsec> git remote add origin https://github.com/kartikisjadhav06/Kartiki-Jadhav.git
error: remote origin already exists.
PS C:\Users\Hp\OneDrive\Desktop\vsec> git remote -v
origin https://github.com/kartikisjadhav06/Kartiki-Jadhav.git (fetch)
origin https://github.com/kartikisjadhav06/Kartiki-Jadhav.git (push)
```

7. **git commit -m "your Message":** Saves the added changes as a commit with the message "uploaded".

```
PS C:\Users\Hp\OneDrive\Desktop\vsec> git add .
PS C:\Users\Hp\OneDrive\Desktop\vsec> git commit -m "Uploaded"
On branch main
Your branch is ahead of 'origin/main' by 1 commit.
  (use "git push" to publish your local commits)

nothing to commit, working tree clean
```

8. **git branch -M main :** Renames your current branch to main.

9. **git push -u origin main :** Uploads your project to the GitHub main branch and remembers the connection for future pushes.

10. **git push :** Uploads your saved changes (commits) to GitHub.

```
PS C:\Users\Hp\OneDrive\Desktop\vsec> git merge --abort
PS C:\Users\Hp\OneDrive\Desktop\vsec> git status
On branch main
Your branch and 'origin/main' have diverged,
and have 1 and 3 different commits each, respectively.
  (use "git pull" if you want to integrate the remote branch with yours)

nothing to commit, working tree clean
PS C:\Users\Hp\OneDrive\Desktop\vsec> git merge -s ours origin/main -m "Merge remote main keeping local files"
Merge made by the 'ours' strategy.
PS C:\Users\Hp\OneDrive\Desktop\vsec> git push -u origin main
